STYNE GROUP

Our reputation has been built on not just our expertise, but how we work with our clients. Working collaboratively from the outset, we find the optimal solution with our clients rather than for our clients.

We understand the demanding requirements of working with the food and beverage industry, the pharmaceutical industry, and energy and construction sectors.

We lead the field in providing bespoke refrigeration, engineering, and electrical solutions. Our refrigeration systems are not only the most energy-efficient available but are future-proofed against the new fluorinated gas legislation. Styne Engineering's design and build capability has improved clients' productivity by offering innovative and cost-effective solutions. And our electrical team's growth is proof of their performance.

Styne Group specialises in the outsourcing of site engineering services and all aspects of production facility maintenance giving our clients peace of mind as well as expertise.

STYNE ENGINEERING

Styne Engineering works closely with our customers to design, manufacture and install precision, cost-effective solutions for their businesses.

We have extensive experience working in the food and beverage, pharmaceutical, power, and construction industries. Our reputation as experts in hygienic conveyor systems, process pipework, gantries, and the construction industry stems from our ethos of innovation, partnership, and customer service.

Our Services

CE Accredited structural steelwork

We have years' of experience in supplying stainless steel conveyors, hoppers and gantries

Ducting

We can cut, roll and weld ducting in stainless steel as well as galvanised and fully welded

Contact us to discuss your project.

Stainless fabrications

We supply any CE Accredited stainless steel fabrications required for hygienic environments

Coded pipework

We manufacture and install high-pressure pipework where safety is paramount

Conveyors

We can design and install every type of conveyor for food suppliers

Bespoke engineering

We also produce high-quality staircases, signage and gates and many other items

STYNE REFRIGERATION

Styne Refrigeration tailors the most advanced refrigeration system to your premises, offering you optimal performance.

Having the best refrigeration technology available is only the start. With different buildings and rooms requiring different temperatures, the design and installation of pipework and ancillary equipment are as important as having the right system if you are to get optimal performance.

Airmatik®

Airmatiks plug and play air-cooled ammonia chillers using aluminum microchannels.

Aluminum microchannels are ideal for ensuring maximum heat exchange and a very low charge of ammonia, Typically 30% more efficient than any other unit using synthetic refrigerant. Airmatiks are custom made to suit any market in the world of subzero refrigeration, including air-conditioning and process cooling at any temperature.

The units are easy to transport in a container and can be mounted on multiple types of compressors, screws, and pistons, including semi-hermetic screws.

They come fully assembled and are tested in the Zudek factory before delivery.

Other Refrigeration Solutions are available on our website.

STYNE ELECTRICAL

Our team of engineers has vast experience in both industrial and commercial installations and maintenance. From 400 Volt mains cables to distribution boards for new production lines, from factory fixed wiring testing to cable temperature surveys, we offer your business a reliable, comprehensive service.

As well as working with businesses, we provide services tailored for local authorities, housing associations, and individuals to make sure that they are safe and compliant with the relevant electrical safety legislation and offer bespoke services for landlords.

Our Services

- Industrial and Commercial
- Electric Vehicle Charging Points
- Electrical testing
- Homeowners and Landlords Services
- Smart Homes and Offices
- legal Responsibilities

We are also suppliers and installers of electric vehicle (EV) charging points and can help clients receive substantial discounts on their installation.

We can install wall mounted units for use in domestic or fleet garages, charging points in visitor's car parks for businesses, provide charging points for housing associations and factories.

STYNE

NET ZERO

With the UK committed to achieving Net Zero by 2050 and reducing carbon emissions by almost 70% by 2030, Styne Net Zero was formed to assist companies in doing so. We can advise, supply, and install:

- Electric vehicle charging solutions
- LED lighting solutions
- Energy efficient Refrigeration
- Production facility efficiency plans
- Green electricity generation
- Air source heat pumps
- Solar panels
